

NAME: P Neeharika

ROLL NO: 2520090233

SKILL WEEK 5

Task 1

To Apply Single Quotes, Preserve Literal Content, Ignore Variable Expansion, Store Quoted Strings, Validate Parsing Results, Test Edge Cases

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>

int main() {
    char *single_quote = "'Hello $USER World'";
    char *double_quote = "\"Hello $USER World\"";
    char *spaces = "\"This is a quoted string\"";

    printf("Single quoted string : %s\n", single_quote);
    printf("Double quoted string : %s\n", double_quote);
    printf("String with spaces : %s\n", spaces);

    printf("\nTesting literal content:\n");
    printf("' $HOME ' remains literal inside single quotes.\n");
    printf("\" $HOME \" allows variable expansion in double quotes.\n");

    return 0;
}
```

```
root@HP: ~
root@HP:~# cd ~/ossp
-bash: cd: /root/ossp: No such file or directory
root@HP:~# nano skill5.c
root@HP:~# gcc skill5.c -o skill5
root@HP:~# ./skill5
Single quoted string : 'Hello $USER World'
Double quoted string : "Hello $USER World"
String with spaces : "This is a quoted string"

Testing literal content:
' $HOME ' remains literal inside single quotes.
" $HOME " allows variable expansion in double quotes.
root@HP:~# |

root@HP:~# name="Neeharika"
root@HP:~# echo '$name'
$name
root@HP:~# echo "$name"
Neeharika
root@HP:~# |
```

```
root@HP:~# echo This is a quoted string
This is a quoted string
root@HP:~# echo "This is a quoted string"
This is a quoted string
root@HP:~# text=This is a quoted string
Command 'is' not found, but can be installed with:
apt install ironseed
root@HP:~# |
```

```
root@HP:~# echo "$text"
This is a quoted string
root@HP:~# |
```

```
root@HP:~# echo "He said 'Hello'"
He said 'Hello'
root@HP:~# echo 'He said "Hello"'
He said "Hello"
root@HP:~# echo ""

root@HP:~# echo ""

root@HP:~# echo '$USER'
$USER
root@HP:~# echo "$USER"
root
root@HP:~# |
```

Task 2

To Apply Double Quotes, Preserve Spaces, Allow Variable Expansion, Parse Nested Tokens, Validate Outputs, Test Quoted Commands

```
root@HP:~# ./skill5
Single quoted string : 'Hello $USER World'
Double quoted string : "Hello $USER World"
String with spaces   : "This is a quoted string"

Testing literal content:
'$HOME' remains literal inside single quotes.
"$HOME" allows variable expansion in double quotes.
root@HP:~# |
```

Final Observation

Single quotes preserve literal content and prevent variable expansion, while double quotes preserve spaces and allow variable expansion.
